Marsha,

I hereby delegate you to represent me at the Water and Sewer Corporation Board meeting tomorrow. I would recommend that you ask the Board to approve the connection, subject to the developer meeting the servicing standard requirements for a STEG system, and providing the required easement for the Utility to have access to the tank to pump it. I would also recommend that you ask the Board to pass a resolution to clarify that the CAO has approval to act as the Authority having Jurisdiction to approve such connection requests, subject to the connections meeting the utility servicing standards for the STEG system. As Mayor Martin has said, the requirements are already laid out and there is no need for the board to weigh in on a transactional matter such as this, which would only hold up the development permit unnecessarily. Please also ask the Board to pass a resolution to recommend the utility budgets, subject to any changes they suggest, if they are ready to make such a motion. If they are not ready to make a motion to recommend approval of the draft budgets and capital plan, there will have to be another meeting scheduled to do so.

Cheers

Robert
